Don't compromise network performance or security

Businesses demand more from their networks than ever before. Yet too many solutions compromise network performance for security. It's a difficult balancing act. How can you achieve security and performance without sacrifice?

Network security challenges

43%

of all cyberattacks target small and medium businesses. Resource-constrained businesses are often easier targets due to outdated firewalls or less sophisticated cyber-defenses that haven't scaled with business growth.

Network performance challenges

84%

of employees say networking infrastructure is essential for seamless remote work. But maintaining network performance is a challenge with expanding traffic, locations, devices, and apps, as well as slow cybersecurity solutions.

The answer: Cisco Secure Connect, a fully managed unified SASE solution

Built on the Meraki platform, Cisco Secure Connect allows you to deliver:

Simplified network operations with security and networking in a single platform

Single pane branch management without the need for switching between multiple UIs

Best-in-breed threat intelligence with Cisco Talos, the world's largest threat intelligence team

Application integrations via Meraki Marketplace to easily scale to new locations

Industry-leading protection with Meraki MX, which blocks 25% more threats than the industry average

Application visibility through ThousandEyes Enterprise Agent

Business continuity for a consistent experience

Secure, seamless experiences for remote workers

Automated firmware upgrades that provide peace of mind

Cisco Secure Connect combines Meraki MX and Umbrella, providing a unified SASE solution that converges networking and security in the cloud

MX+

Offer Secure Connect, and then add these other Cisco solutions to provide even more value:

MX + Duo
Secure users with powerful multi-factor authentication and Zero Trust network access.

MX + ThousandEyes
Get deep WAN visibility and assurance to optimize digital experiences

MX + MG cellular gateway
Achieve network resilience through seamless connectivity with built-in automatic WAN and cellular failover

Upgrade your network security with Meraki platform

Don't settle for standalone, inflexible products that can't scale. Get the highest cybersecurity protection that also optimizes connectivity and scales without complexity.
