BEST OF BREED SECURITY OFFERINGS

AS YOU PURSUE A ZERO TRUST NETWORK ARCHITECTURE (ZTNA), EASTERN CAN BE YOUR VALUED PARTNER TO HELP EVALUATE AND PLAN THE MIGRATION.

Your network is only as good as its security, and traditional signature-based detection and blocking defenses are no longer adequate. At Eastern, security is not an afterthought, it's a comprehensive security study that's strategically integrated into all of our offerings. We have been instrumental in the design of some of the largest and safest networks in the world, with build-outs that help protect against unauthorized intrusion across the full attack continuum.

Given today's current state of technological security, it is imperative to provide our customers with a full arsenal of Zero-Trust security solution options. We only partner with the best in the industry - security leaders like Cisco, CrowdStrike, SentinelOne, Dell EMC Cyber Recovery, Zscaler and Microsoft.

Eastern's extensive list of security partners empowers us to find the perfect solution for each business case. We architect customized solutions based solely on your company needs, as we understand that every company is different, and current situations vary. We value each and every partner for their expertise and market leadership. We are a proud Cisco Gold and Dell Titanium Partner, and are constantly building our security arsenals to ensure our customers are getting the best the industry has to offer.

A FEW OF OUR VALUED SECURITY PARTNERS

Dell EMC for Cyber Recovery
Are you looking at how you are protecting your backup from encryption or destruction? Or how long it would take to recover from a cyber security disaster if your backups were destroyed or encrypted? Dell EMC for Cyber Recovery solutions should be something you take a hard look at as the market share leader of Data Protection Appliances and Software.
Read more about these powerful security solutions.

Zscaler
Do you have a cloud first strategy and are looking to move workloads to the cloud? Then consider the Zscaler security stack supporting ZTNA that is cloud-focused and includes costs that scale with usage. This helps avoid costly infrastructure setups required for replicating on -premise security infrastructure into the cloud environment as well as licensing fees.
Read At A Glance: Zero Trust Secure Remote Access Benefits

Microsoft
The Microsoft ecosystem has the most comprehensive identity and security solutions on the market today. Leverage Azure AD as your cloud based identity platform offering single-sign on, Multi-Factor Authentication, and Conditional Access policies for your enterprise employees, business partners (B2B), or consumer (B2C) identities. Utilize Microsoft Defender as your XDR platform, with Defender for Cloud, Defender for Cloud Apps, Defender for Endpoint, Defender for M365, and Defender for Identity and Identity Protection providing you a 365 degree protection solution.

CrowdStrike/SentinelOne
Protecting the endpoints and servers from zero-day malware and ransomware is a full time job. Using AI based tools and deep-link analytics, your company can have XDR, EDR, next-gen AV and device control.

Additional security services include:
- Security Strategic and Tactical Consulting - helping you meet your HIPAA, PCI or NIST compliance requirements
- BCDR - to minimize unexpected outages due to malware/weather/misconfigurations
- Tabletop exercises to ensure your plans work as expected
- SOC/SIEM - 24/7 or hybrid solutions to watch for critical events when you are away
- Security Awareness Training
- Policy and Procedure Development

Policies & Procedures Development

Security Policy	Patching Policy
