

SEEKR INQUIRY FORM

Below please find questions pertaining to the Pharmaceutical vertical.

1. How much time do your scientists and quality folks waste looking for the right lab report or batch record?

2. What's the biggest worry when someone pulls a document: Is it the latest version? Did they grab the wrong one? Can you prove where it came from?

3. When you search and get results, can you instantly see exactly which file or database the answer came from?

4. Which documents are a nightmare to find: old scanned stability charts, huge clinical study files, or validation reports in different languages?

5. Does slow document hunting delay your drug approvals, factory inspections, or when you need to fix a quality problem?

6. Can people search by asking normal questions like "show me cleaning validation for Equipment #23," or do they need special keywords?

7. How often do you double-check "Is this really the right source?" before using search results in official reports?

8. If FDA walks in tomorrow, how fast can you dig up proof from 10,000+ batch records and lab tests?

9. What if one search could check your lab systems, quality systems, AND outside research papers—and always show you exactly where each answer came from?

10. If you could fix ONE document search problem (speed, proof of source, following rules, or checking multiple systems), which one would save your team the most time and hassle?
